

3. Guidance for implementation

June 2026

The better the question. The better the answer. The better the world works.

Shape the future
with confidence

Hands-On Build Workshop

■■■ Building Tax Prompt Libraries and Microsoft 365 Copilot Agents

01

Build

02

Test

03

Refine

The objective is no longer awareness. Participants should spend more time in Copilot than looking at slides.

Workshop objective

- Translate Phase 2 use cases into practical AI solutions for the tax function.

Today's build zone

- Prompt engineering
- M365 Copilot Agents
- Human review controls

Expected outcomes

- Tax Prompt Templates
- Draft Agent Instructions
- Pilot Use Cases
- Human Review Framework
- AI Adoption Playbook

Facilitator deck + detailed handouts

Building better tax prompts

■ ■ ■ Prompt engineering refresher

A prompt is the control surface for quality, scope and reviewability.

01	Persona	Who should the AI act as?
02	Context	Why is the task being performed?
03	Instructions	What exactly must be done?
04	Tone & style	How should it read?
05	Examples	Use few-shot examples where possible.
06	Output indicator	Specify sections or table format.
07	Constraints	Define what should not be done.
08	Grounding	Anchor to approved source documents.

Example prompt seed

You are a senior Indian tax professional specialising in transfer pricing and international taxation.

Prepare the analysis for a regional tax director. Compare current-year and prior-year intercompany transactions and identify material changes.

Use a professional advisory style and rely only on specified source documents.

Good outputs start with good prompts.

Instruction components

■ ■ ■ Anatomy of a good M365 agent

Design the assistant like a repeatable tax process — not a generic chatbot.

01	Purpose	Why does the agent exist?
02	Knowledge sources	Where should it search?
03	Core responsibilities	Summaries, retrieve, organize, draft, report.
04	Workflow	What steps should it follow?
05	Output format	Define standard sections.
06	Escalation rules	When should it ask for help?
07	Guardrails	What must it never do?

● Agent workflow

- ☐01 Receive request
- ☐02 Search repository
- ☐03 Summaries findings
- ☐04 Identify gaps
- ☐05 Prepare output

Example purpose:
Assist tax teams in gathering and organising transfer pricing documentation.

The most important control

■ ■ ■ Human-In-The-Loop (HITL)

AI assists with drafts and structure. Tax professionals decide the final position.

Human review should validate

Facts

Assumptions

Calculations

Legal references

Recommendations

Final conclusions

Tax functions should never delegate

Technical tax positions

Tax authority submissions

Litigation strategy

Return sign-offs

Professional opinions

Golden Rule

AI assists. Tax professionals decide.

Workshop reference library

Sample prompt templates

Use the programme handouts for detailed templates; use this slide as the build menu.

Compare & assess prompts

01

Calendar Year vs Financial Year

02

New Regime vs Old Regime

03

Global vs Local Policy Review

Review & recommend prompts

01

Tax Exposure Assessment

02

Process Gap Assessment

03

Shared Service Cost Allocation Review

Analyse & detect prompts

01

Outlier Detection

02

Tax-Sensitive GL Review

03

Predictive Tax Analytics

From build lab to controlled deployment

Sample M365 agent templates

Convert draft instructions into pilots, adoption rituals and continuous refinement.

Agent instruction library

- | | | | |
|---|--|---|---|
| <p>1 Tax Information Request Agent</p> <p>Collect, organise and track tax information requests.</p> | <p>2 Transfer Pricing Documentation Agent</p> <p>Retrieve and organise TP documentation.</p> | <p>3 Assessment & Litigation Evidence Agent</p> <p>Locate, summarise and package supporting evidence.</p> | <p>4 Tax Knowledge Retrieval Agent</p> <p>Retrieve prior opinions and historical tax positions.</p> |
| <p>5 Compliance Calendar Agent</p> <p>Track obligations and deadlines.</p> | <p>6 Tax Leadership Reporting Agent</p> <p>Prepare executive dashboards and reporting packs.</p> | <p>7 Tax Communication & Correspondence Agent</p> <p>Draft recurring tax communications.</p> | |

You now have

Identified tax AI opportunities

Built prompt templates

Designed AI-enabled processes

Built Copilot Agent instructions

Guidance for implementation

What's next?

Hands-on Build **Workshop**

Controlled deployment, user adoption and continuous refinement of the Tax AI operating model.

Looking ahead – Phase 3

Phase 2 helped us understand AI. **Phase 3** identifies where AI can create value in tax. Phase 3 turns those opportunities into working solutions through prompts, Copilot Agents and practical implementation guidance.

How was your experience attending this session?
